

KASINA SESSION CREATION PLUGINS FOR MULAB

We've included three free bonus software plugins for the MuLab multitrack audio editing application. They are: The Kasina Effect (TKE), which can be used to precisely create and control the SpectraStrobe signals used to control Kasina's lights. Kasina Beat Maker (KBM) uses an alternative approach to creating light signals and adding them to your audio tracks, and Kasina Light Organ (KLO) allows you to 'play' notes over an octave, which can be used to make sessions spontaneously, with real-time control.

These plugins are not recommended for those new to audio editing software, as it can take some time to become familiar with how to use both MuLab and the plugins.

All three have been developed by Craig Tice, who will provide some support on www.mindplacesupport.com, in the Forums section.

If you're ready to start creating, you can download the free, 4 track version of MuLab from here:
